About the Speaker and Program ...

Our speaker for December is Ms. Heimann, who is a co-inventor of several embodiments of the Elisha® mineralization technology. The Elisha® technology uses novel approaches to protect metals without the use of toxic or regulated materials.

She graduated from the University of Missouri with a BS in Chemical Engineering in 1983, and has held positions of product engineering manager for a fiberglass fabrication company, laboratory manager for contract research organization, and international business development manager of new products for a pharmaceutical research organization. Heimann joined Elisha in 1995, and has been responsible for new technology development, technology transfer and collaboration with licensee partners, and new business development. She is currently the business manager of Elisha.

Elisha Technologies Co., L.L.C. has developed a novel process for protecting metals from corrosion that is completely chromate-free. Elisha's EMC™ process allows for easy compliance with European Union's End-of-Life Vehicle controlled substances mandate. Elisha's EMC™ contains no hexavalent chromate, and no trivalent chromate, and in fact no heavy metals at all.

This presentation will show corrosion performance, and discuss specification approvals for the Elisha NOCHROME solution.
